Lautaro Lasorsa

lautarolasorsa@gmail.com •LinkedIn: lautaro-lasorsa •GitHub: LautaroLasorsa

Why should you hire me?

I build reliable, maintainable agentic AI systems and async Python backends end-to-end: from designing scalable architectures, abstractions, and relational schemas to continuously evaluating LLM behavior through reproducible test suites and error analysis. My background in software engineering, data science, and competitive programming helps me tackle complex technical challenges with good judgment, working directly alongside CTO and product teams.

Professional Experience

Silver.dev (Remote)
Technical Interviewer (On-Demand Contractor) September 2026 - Present

- Conduct technical interviews for software engineers applying to US-based tech companies, specializing in **System Design** (scalable architectures, distributed systems, and trade-off analysis).

Autoscheduler.AI (Remote)
Machine Learning Engineer / AI Engineer July 2025 - October 2026

- Designed and implemented production agentic AI workflows with LangChain and LangGraph, including prompting, structured outputs, and context management for a warehouse orchestration platform.
- Built multi-agent components for conversational data retrieval, analysis, and natural language interaction with business data, plus an app-creation agentic platform.
- Developed async Python/FastAPI services and integration layers to connect the assistant with SQL Server, Redis, and Cosmos DB, deployed through Docker and Azure DevOps CI/CD with pytest, Ruff, and static type checking.
- Built an agent behavior evaluation suite with reproducible test cases and error analysis, optimizing accuracy, latency, and cost through retrieval context, model selection, and prompt structure.
- Implemented data visualization and reporting features with Plotly and matplotlib, and designed the relational database schema.

Mutt Data (Remote)
Ssr Data Developer February 2025 - June 2025

- Built ETL pipelines in Google BigQuery to process user engagement data at scale and deliver KPI dashboards for CTR, VTR, completion rate, and time viewed.
- Enriched event data with Typesense and TMDB metadata, using BigQuery table design, CTEs, and window functions for analytics and search.
- Earned the Databricks Certified Data Engineer Associate certification.

Composable Finance (Remote)
Cryptography Consultant April 2023 - July 2024

- Worked on financial transaction infrastructure, implementing ED-25519 signature verification with Zero Knowledge (ZK) over Gnark.
- Developed a solution to optimize transactions using graph algorithms and Python.

University Teaching — Universidad de Buenos Aires (UBA) & UNLaM
Head Class Assistant (JTP) & Competitive Programming Coach (Part-time, Flexible Hours) March 2020 - Present

- **UBA (2025–Present):** Led Algorithms & Data Structures practical sessions and designed midterm exams for 200+ students.
- **UNLaM (2020–Present):** Taught competitive programming on Saturdays using C++, Python, and Kotlin; coached 19 university teams competing in the Argentina Programming Tournament (TAP, 2022–2026).

Competitive Programming and Awards

- ICPC World Finalist (2020: 22nd, 2023: 13th - Bronze Medal, 2024: 17th); Latin America Regional Champion in all three participations.
- IOI participant (2017, 2018, 2019), with a Bronze Medal in 2018 (top 50%).
- Speaker at 4 editions of Training Camp Argentina on *Segment Trees*, *SQRT Decomposition*, *Centroid and Heavy-Light Decomposition*, and *Flow Algorithms*.
- Built a competitive programming toolkit repository with reusable commands and setup utilities.

Education

Universidad de Buenos Aires (UBA)
B.S. + M.S. Equivalent (Licenciatura) in Data Science — GPA: 9.09/10 March 2019 - December 2024

Universidad Nacional de La Matanza (UNLaM)
Computer Engineering (integrated B.S. + M.S.) — GPA: 8.46/10 (in progress) March 2019 - December 2027 (expected)

Technical Skills

Programming & Architecture: Python (production, async), C++, SQL, System Design, Relational Schema Design.
LLM and AI: LangChain, LangGraph, multi-agent orchestration, structured outputs, evaluation design and error analysis.
Data and Infrastructure: FastAPI, BigQuery, ETL, Typesense, Redis, Cosmos DB, SQL Server, Docker, CI/CD, pytest, Ruff.

Additional Information

Languages: English (EF SET 76/100 C2 Proficient).
Scientific publications: Member of an AI & IoT research group at UNLaM since 2021, with 4 published papers (1, 2, 3, 4).
